

PRAJWAL V

Cybersecurity & Cloud Security Enthusiast | Computer Science Engineering Student

Bengaluru, India | +91-7411767592 | vprajwal2204@gmail.com

GitHub: github.com/prajwal-2201 | LinkedIn: linkedin.com/in/prajwal-v-b975952a0

PROFESSIONAL SUMMARY

Cybersecurity-focused Computer Science Engineering student with hands-on experience in intrusion detection, vulnerability assessment, and web application security testing. Strong foundation in defensive security (Blue Team), SOC concepts, and secure system design. Skilled in Linux environments, Python-based security scripting, and practical security tools. Passionate about building secure systems and actively seeking a cybersecurity or cloud security internship to apply and expand real-world skills.

TECHNICAL SKILLS

Cybersecurity & Blue Team:

- Intrusion Detection Systems (IDS), log analysis, basic SOC workflows
- Vulnerability assessment & threat analysis
- Web security fundamentals (OWASP Top 10)
- Cryptography fundamentals (AES, RSA)

Tools & Platforms:

- Linux, Kali Linux, Git, GitHub, VS Code
- Nmap, Burp Suite, basic Suricata exposure

Programming:

- Python (security scripting), C, Java
-

PROJECTS

Intrusion Detection System (IDS)

- Developed a host-based IDS using Python and security concepts to monitor and detect suspicious activities.
- Implemented detection logic based on common attack patterns and indicators of compromise (IOCs).
- Strengthened understanding of real-time threat detection and defensive security strategies.

Vulnerability Scanner

- Built a Python-based tool to identify potential security weaknesses in systems and applications.
- Simulated basic vulnerability assessment workflows and analyzed possible mitigation strategies.

Web Application Penetration Testing (DVWA)

- Conducted penetration testing on a deliberately vulnerable web application (DVWA).
- Identified common vulnerabilities such as input validation flaws and misconfigurations.
- Applied ethical hacking methodology and documented findings like a real pentest report.

VanishLAN Messenger (LAN-Based Secure Messaging App)

- Developed a lightweight LAN-based messaging system using Python for real-time communication.
- Implemented auto-deletion of messages to enhance privacy.
- (Enhancement ongoing: encryption, secure communication, and authentication features)

CERTIFICATIONS

- **Cisco Networking Academy – Ethical Hacker (2026)**
- **Introduction to Penetration Testing – Security Blue Team (2026)**
- **Cybersecurity Course – Tech Mahindra Foundation (Skill India) (2026)**

EDUCATION

Bachelor of Engineering – Computer Science Engineering
PES University, Karnataka | 2023 – 2027

AREAS OF INTEREST

Cybersecurity (Blue Team & SOC Operations), Cloud Security, Ethical Hacking, Secure Software Development, Linux Security
